

Remarks

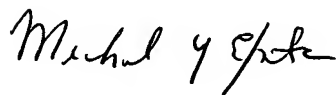

Claim 1 is amended to correct a grammatical error.

New claim 8 is added directed to floats having different shapes and drafts for rising and falling in out of phase relation with one another. New claim 8 distinguishes from Dick for the same reasons presented on behalf of claims 1-7 in the amendment mailed December 30 2005.

Kindly replace original figure 1 with the herewith-enclosed replacement page. The reason for the drawing change is that original figure 1 at least appears to show the float 200 as resting on a pedestal 202 resting on the floor of the body of water. The specification describes, however, that the item 202 is simply a weight at the bottom end of the float 200 and that, in operation, both floats 100 and 200 bob up-and-down within the water. Quite clearly, therefore, for such bobbing to occur, the float 200 must be spaced above the bottom surface. The requested change merely corrects an obvious drafting error and is not new matter.

Entry of the replacement drawing and allowance of application are respectfully requested.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "Michael Y. Epstein".

Michael Y. Epstein,
